

SIGA-SB4 Detector Base Installation Sheet

Description

The SIGA-SB4 is the standard Signature Series detector base with outer mounting lugs for a 4-inch square box, and includes a SIGA-TS trim skirt. The base connects the detector to the signaling line circuit (SLC), and provides wiring terminals for connection to a SIGA-LED.

Installation

Caution: Risk of equipment damage. To prevent damage to the base, do not overtighten the base mounting screws or wire terminal screws. Refer to "Specifications" for torque values.

Refer to Technical Bulletin P/N 270145-EN for location and spacing requirements.

To install the SIGA-SB4:

1. Mount the SIGA-SB4 on a compatible electrical box using the screws provided with the electrical box.
2. Wire the base as shown in the "Wiring" section.
3. Write the address assigned to the detector on the label provided and apply the label to the inside rim of the base.
4. Install the SIGA-TS trim skirt to finish the installation.

Wiring

Caution: Risk of system failure. Electrical supervision requires that the wire run be broken at each terminal. Do not loop the field wires around the terminals.

Notes

- Shielded wire is required only in environments with very high electrical noise.
- Shields, if used, must be continuous and insulated from ground.
- For Class B wiring, there is no shield connection to ground at the last device.

To wire the SIGA-SB4:

1. Wire the detector base as shown in Figure 1.
Break the wire run at each terminal. Do not loop the signaling line circuit field wires around the terminals.
2. Insulate the shield with electrical tape.
